§ 146.21

drilled, location, depth, record of plugging and/or completion, and any additional information the Director may require:

- (4) Maps and cross sections indicating the general vertical and lateral limits of all underground sources of drinking water within the area of review, their position relative to the injection formation and the direction of water movement, where known, in each underground source of drinking water which may be affected by the proposed injection;
- (5) Maps and cross sections detailing the geologic structure of the local area;
- (6) Generalized maps and cross sections illustrating the regional geologic setting:
 - (7) Proposed operating data:
- (i) Average and maximum daily rate and volume of the fluid to be injected;
- (ii) Average and maximum injection pressure; and
- (iii) Source and an analysis of the chemical, physical, radiological and biological characteristics of injection fluids;
- (8) Proposed formation testing program to obtain an analysis of the chemical, physical and radiological characteristics of and other information on the receiving formation;
 - (9) Proposed stimulation program;
 - (10) Proposed injection procedure;
- (11) Schematic or other appropriate drawings of the surface and subsurface construction details of the well.
- (12) Contingency plans to cope with all shut-ins or well failures so as to prevent migration of fluids into any underground source of drinking water;
- (13) Plans (including maps) for meeting the monitoring requirements in §146.13(b);
- (14) For wells within the area of review which penetrate the injection zone but are not properly completed or plugged, the corrective action proposed to be taken under 40 CFR 144.55;
- (15) Construction procedures including a cementing and casing program, logging procedures, deviation checks, and a drilling, testing, and coring program; and
- (16) A certificate that the applicant has assured, through a performance bond or other appropriate means, the resources necessary to close, plug or

abandon the well as required by 40 CFR 122.42(g).

- (b) Prior to granting approval for the operation of a Class I well the Director shall consider the following information:
- (1) All available logging and testing program data on the well;
- (2) A demonstration of mechanical integrity pursuant to §146.8;
- (3) The anticipated maximum pressure and flow rate at which the permittee will operate;
- (4) The results of the formation testing program;
 - (5) The actual injection procedure;
- (6) The compatibility of injected waste with fluids in the injection zone and minerals in both the injection zone and the confining zone; and
- (7) The status of corrective action on defective wells in the area of review.
- (c) Prior to granting approval for the plugging and abandonment of a Class I well the Director shall consider the following information:
- (1) The type and number of plugs to be used:
- (2) The placement of each plug including the elevation of the top and bottom;
- (3) The type and grade and quantity of cement to be used;
- (4) The method for placement of the plugs; and
- (5) The procedure to be used to meet the requirement of §146.10(c).

Subpart C—Criteria and Standards Applicable to Class II Wells

$\S 146.21$ Applicability.

This subpart establishes criteria and standards for underground injection control programs to regulate Class II wells

§ 146.22 Construction requirements.

(a) All new Class II wells shall be sited in such a fashion that they inject into a formation which is separated from any USDW by a confining zone
